# Support for Industrial Processes

Genuine Spare Parts and Maintenance Equipment to Optimize your Industrial Processes

## A Lifelong Commitment

At Exakta, we make life easy for our customers by offering a wide range of genuine spare parts able to tackle the challenges of industrial processes.

Knowing the importance of keeping processes running smoothly and efficiently, we support end users and operators with real-time quotations for spare parts. We're able to offer extremely short lead times courtesy of a stockholding of 2,000 kits and components at our central warehouse.

## Easy to check and install

Exakta genuine spare parts are available in a clean and organized stock for a smoother pick-up and faster delivery to the customer.

Our vacuum packaging allows the customer to make an immediate visual check on the integrity and quantity of the parts while preventing quality degradation and ensuring long shelf life.

Mechanism Gasket Kit

## Always on the go

Exakta's purchasing department is always looking for innovative materials to ensure steady spare parts improvement in terms of quality and efficiency, supporting the customer in the most challenging applications.

Whether your pump requires quick maintenance or full-service repair, Exakta's customized kits conveniently provide all the parts you need for an immediate fix.

Purge, Feeler, Replenishment Kit

Nexa XP Spring, Valve Kit

## Worthy at the first glance

Prior to shipping, each part is duly inspected to meet quality and certification requirements while special components such as valves come factory pre-set to fulfill the same performance and criteria as the original product and ensure consistent operation.

## Help yourselves!

At Exakta we're well aware of the importance of reducing planned and unplanned downtime, which is why we provide a toolbox equipped with the necessary apparatus for the quick and easy replacement of our spare parts.

The standard supply includes:

- Special tool for packing adjustment
- 6 mm pin punch
- 8 mm pin punch
- 10 mm pin punch
- Bearing extractor
- Vacuum pump kit
- Feeler extractor
- Feeler valve driver
- Torque wrench
- Feeler valve group assembling tool
- 3 pump lifting belts

*Other tools can be provided on customer request.*

## Sustainable protective packaging

From the meticulous selection of raw materials to the innovative design of item-specific packaging, Exakta spare parts embody sustainability and reliability, mitigating the risk of quality degradation and ensuring long shelf life.

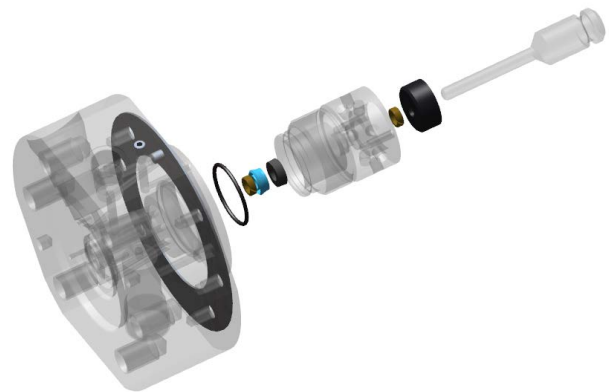

Internally, our spare parts are carefully encased in shaped plastazote®, offering superior protection against physical and chemical elements. This high-density closed-cell foam not only provides cushioning and safeguarding but also lightweight, durable, flexible, and resilient properties—ideal characteristics for delicate parts packaging. Moreover, our plastazote®, packaging is inert, acid-free, and perfectly suited for specific storage, safeguarding genuine spare parts from potential damage.

Externally, our spare parts are housed in FSC Mix-certified boxes, guaranteeing sustainable sourcing and forest management practices. Each carton box is labeled for instant traceability, including instructions on the required storage conditions, demonstrating Exakta's commitment to both quality and environmental conservation.

Smaller components are enveloped in Vapour Corrosion Inhibitor (VCI) Polypropylene, providing comprehensive protection against corrosion and oxidation and thus delivering spare parts with the highest standards of quality.

## Up to your every request

Our spare parts team provides highly qualified advice to accurately identify the right components, assisting customers in their selection and expediting the spare parts supply procedure.

Allow us to fulfill your spare parts requests by providing a few easy-to-find pieces of information available on our pump nameplates:

- Model of the pump (a sixteen-digit alphanumeric code)
- Serial number of the pump (a six-digit code)

Our Service department is committed to supporting our clients from pump order acquisition with the issuance of Spare Parts Interchangeability Record (SPIR). This document, which is made available shortly after the pump drawing has been approved, contains a comprehensive list of consumables that are generally recommended for 2 years of full pump operation.

Drop your email at [service.ip@exakta.com](mailto:service.ip@exakta.com) and let our staff assist you!

A large, multi-level offshore oil rig is shown at sunset. The rig is illuminated with warm yellow lights, and its complex structure of pipes, ladders, and platforms is visible. The sun is low on the horizon, casting a golden glow over the sea and the rig. The sky is a mix of orange, pink, and purple. The rig's legs are visible in the water.
